FEED MILLS

Kalina-Klenski Ltd. designs, manufactures and installs feed mills according to the specific needs of each client. The purpose of each feed mill is to produce a feed according to a specific recipe. For this purpose, the main processes that are performed in each feed mill are the following:

- depositing of the raw materials in bunkers;
- dosing of the specified quantities of raw materials;
- milling;
- mixing;
- depositing of finished goods.

Depending on the specific needs of customers, the production line can be extended by adding other processes such as granulation of finished products.

In addition to the complete construction of sites, Kalina-Klenski Ltd. performs reconstruction of technological units as well as production and delivery of single machines. The company performs warranty and service, as well as independent technical solutions, depending on the specific requirements.

Kalina-Klenski Ltd. develops and offers a wide range of machinery and equipment for the production of feed:

- bunkers for cereal products; g
- grain transport systems - augers, bucket elevators, chain conveyors;
- electronic scales;
- hammer mills;
- mixers;
- cyclones and others.
